

**AirCell's ATG Licensing Proposal**

**Does Provide:**

- Competitive opportunities for 2 to 4 broadband terrestrial ATG providers
- Full broadband service (3.1 Mbps) with no degradation
- Deck-to-deck coverage (below 10,000 ft. to the runway)
- Greater (up to four times) the capacity than a single ATG provider
- Spectrum efficiency and innovative spectrum sharing techniques
- Simple rules for spectrum sharing and coordination

**Does NOT:**

- Permit any interference or have a negative impact on other ATG licensees
- Cause any performance penalty for users due to multiple providers
- Limit the ATG licensees' ability to evolve and innovate
- Require FCC intervention to ensure licensee coordination or constrain FCC resources
- Impose unnecessary or undue costs or restrictions on ATG licensees

***Only competitive, broadband ATG systems will fully satisfy airline/passenger needs – satellite systems are not competitive, and ATG systems in 1.5 MHz or less will not be competitive***
